

SUMMARY

Multidisciplinary leader who has built solutions and scaled services across **products, businesses, operations, engineering and platforms** — in multiple regulated industries and four continents.

- Scaled a stalled fintech 10K → 120K merchants in 18 months; co-architected national payment network across 30+ FIs.
- Tripled Fortune 50 deployment throughput at half the resources; built crisis-response analytics enterprise-wide.
- Operate \$1.4B+ regulated platform (~2M meters, NY/MA); established vendor accountability framework unlocking \$2M+/month.

20+ years of building what doesn't exist yet: seeing problems others accept as normal, reframing them, and creating solutions that change how organizations operate.

CROSS-FUNCTIONAL CAREER PROGRESSION

Head of Products | National Grid | 2022 – Present

Own the platform that powers National Grid's metering modernization across architecture, data, integration, security, environments, network, and DevOps. Lead a cross-functional team of 30 supporting 8 downstream teams and 2M+ smart meters in NY and MA.

- Shipped every major \$1.4B+ program milestone on schedule — 100% of key objectives across 80+ features per program increment.
- Cut feature turnaround by over 50% by introducing end-to-end measurements that reshaped how teams plan, build, and ship.
- Achieved 4x deployment throughput by replacing email-based change management with full automation and visibility.
- Built vendor performance accountability the program lacked — every deliverable accelerated; \$2M+/month was one of many gains.
- Stepped up to lead change-management tooling and analytics — teams stopped drowning in reports, leadership stopped flying blind.

Senior Technical Program Manager | Comcast | 2017 – 2022

Transformed network deployment operations and built the analytics capability executive decisions ran on, across 4 national data centers and 100+ regional facilities. Recruited by enterprise cybersecurity leadership to replicate both, scaling to 30+ engineers.

- Unlocked 3x more deployments with 50% fewer resources by rebuilding flows, rejecting the default that scale needed more people.
- Tapped for a critical unplanned in-house cloud buildout, cut delivery from 12 months to 6 with every parallel deliverable still on time.
- Spotted visibility gap and built analytics and automation 20+ enterprise projects relied on for ops, budgeting, risk, and procurement.
- Broke silos to power Log4Shell remediation by building crisis reporting that surfaced vulnerabilities and tracked fixes to closure.

MBA | Widener University | 2015 – 2017

Relocated to the US to operate at a scale where the impact could be global, not just regional.

Vice President, Payment Card Services | Infotech International | 2013 – 2015

Conceived the B2C payment services venture at parent company level. Stepped in after initial leadership failed and turned it into a network of 120K merchants, processing 150M+ annual transactions. Orchestrated an organization of 50+ employees and 700+ field technicians spanning operations, technology, vendor management, marketing, and call center; 12 direct reports.

- Recovered a make-or-break 60K terminal contract stalled at 10K and on the brink, by overhauling an embattled business in months.
- Scaled deployments to 10K/month and grew transaction volume 54x in 18 months through first-to-market product innovations.
- Translating what others missed into 4.5x revenue per terminal by displacing competitors and pushing transactions 20 → 90/monthly.
- Ranked #1 of national payment providers at 99.5/100 across every measure, having co-authored standards adopted as regulation.
- Co-architected the national interbank payment network at the central bank's table across 30+ banks and financial institutions.

Director, Products & Program Management Office | Infotech International | 2009 – 2013

Owned product vision, strategy, and roadmap across 7 engineering teams (40+ engineers). Created the PMO that became the central delivery engine for 20+ products across 30+ financial institutions in Southwest Asia, North Africa, and Western Europe.

- Grew market share from 5-10% to 50% on a \$250M+ portfolio: 20+ products and 1M+ payment terminals supplied and supported.
- Turned a 20-unit obsolete product into a 5,000+ platform by taking software ownership and reinventing what hardware could do.
- Forged a 2M+ monthly e-voucher distribution platform that catalyzed terminal sales while compounding revenue three ways.

Manager, Software Development | Infotech International | 2006 – 2009

- Led 8 engineers and owned technical direction for the company’s payment applications and terminal management products, turning speed into the company’s strongest competitive advantage.
- Cut delivery 10x — releases 6-8 weeks to 3-5 days, deployments 5-6 months to 2-3 weeks — via market's first configurable platform.
 - Scaled terminal network 10K to 100K+ and customers 2 to 8 financial institutions at accelerating pace competitors couldn’t match.

Software Developer | Infotech International | 2004 – 2006

- Delivered two market firsts:
- First remote terminal management system, eliminating physical servicing nationwide.
 - First domestic POS application to process live transactions through the national payment switch.

INDEPENDENT VENTURES

- What I build when the problem is too interesting to ignore:
- Frame the problem, set the product direction, design the architecture, and decide what ships and when. Operate Claude Code end-to-end; every line of code is AI-written. Live to real users, shipped solo, full-stack — without an engineering team.
- **Project Lighthouse**: Rethinking how large organizations manage priorities and risk, replacing traditional PMO overhead with real-time visual alignment that requires near-zero active interference.
 - **Jingle**: Challenging platform lock-in by building a cross-platform music app that lets users own their data and move freely between Spotify, Apple Music, and YouTube. Live on TestFlight.
 - **MailFlow**: Reframing inbox as Respond/Act/Know/Ignore actions via autonomous AI agent with tiered LLM routing (Sonnet + Haiku).

TEACHING & ACADEMIC CREDENTIALS

Adjunct Instructor | Widener University | 2021 – Present

- Invited back by the university to design and teach graduate and undergraduate courses:
- Designed and launched Innovation Toolbox, a graduate course in design thinking, problem solving, Lean, and Agile principles.
 - Modernized Database Management Systems curriculum with hands-on applied learning.

Education:

- **MBA, Strategic Leadership & Business Process Innovation** | Widener University, 2017
- **BS, Software Engineering** | Azad University, 2005

CERTIFICATIONS & HONORS

- | | |
|---|--|
| • Beta Gamma Sigma Honors Society | • PMP (Project Management Professional, PMI) |
| • AWS Cloud Practitioner | • CSPO (Certified Scrum Product Owner, Scrum Alliance) |
| • CPISI (Certified Card Payment Security Implementor, SISA) | • POPM (Product Owner / Product Manager, SAFe) |
| • CSCIP/Payments (Certified Smart Card Industry Professional) | • SA (Scaled Agilist, SAFe) |

CORE COMPETENCIES

- | | |
|---|--|
| • Operational Turnaround & Transformation | • Regulated Industry Ops (Energy, Utilities, FinTech, PCI-DSS) |
| • Executive Communication & Stakeholder Alignment | • KPI/OKR-Driven Decision Making & Analytics |
| • Product Strategy, Roadmapping, Go-to-Market and P&L | • Cross-Functional Team Leadership (50+ direct/indirect) |
| • Vendor & Partnership Management | • AI-Augmented Operations & Process Automation |

TOOLS & TECHNOLOGIES

- | | |
|--|---|
| • Agentic AI, LLMs & GenAI, Claude Code, Anthropic API, MCP | • ANSI C, Java, Python, Swift, PowerShell, Embedded Systems |
| • Analytics & BI: Tableau, Power BI, easyBI, SQL | • GitHub/Git, GitHub Actions, REST APIs, Xcode, TestFlight |
| • Jira & Jira Align, Confluence, Smartsheet, Excel, ServiceNow | • Cloud Platforms: Cloudflare, AWS |
